

BE YOUR OWN HERO

**Your Knees can now
HEAL FASTER, FEEL BETTER & LAST LONGER!!**

“

Knee pain from Osteoarthritis can limit your daily life—but effective treatments are available.

And when Knee Replacement becomes the best option, AHCH offers advanced technology, skilled surgeons, and a patient-first approach to ensure safe, precise, and comfortable outcomes.

At Amba Health Centre & Hospital, our focus is simple:

Walk better. Move freely. Live fully.

This booklet will help you understand Knee Replacement surgery and how our team supports you at every step.

Dr. Maunil Nayak

is Your Knee Pain Controlling Your Life?

Blood tests, fitness evaluation and implant planning

3. The Surgery

Performed with precision + expert surgeon

4. Walk in 24–48 Hours

Fast recovery helps you get on your feet early

5. Discharge in 2–3 Days

Safe, comfortable, and supervised stay

6. Guided Physiotherapy

Customized recovery program

7. Life After Surgery

Stairs, walking, and daily activities become possible again

Why Robotics?

Imagine a pilot flying through a storm. Years ago, the pilot depended mainly on instincts.

Today, advanced GPS and autopilot systems guide the flight –making it smoother, safer, and more precise.

Robotic Knee Replacement works the same way.

In a traditional knee replacement, much of the procedure relies on the surgeon's visual judgment. But with robotic assistance, the same surgeon gets a detailed 3D view of your knee and can plan the exact size, angle, and placement of the implant with exceptional accuracy.

The result?

More precision. More consistency. Better outcomes. Every time.

Personalization **Versatility** **Performance**

Realistic & Reassuring Outcomes Most Patients experience:

Improved
Walking

Enjoy Precious
Moments

Sit Cross Legged

Climb Stairs

Better Sleep

Common Concerns *Answered Honestly*

- 1 “Is the surgery painful?”**

We use advanced pain-control methods – discomfort is minimal and improves fast.
- 2 “How long until I can walk?”**

Most patients walk within 24–48 hours.
- 3 “When can I resume normal life?”**

Daily activities: 3–6 weeks
Driving: 4–6 weeks
Stairs: 3–4 weeks
- 4 “What if something goes wrong?”**

We follow strict safety protocols with a highly trained team and proven track record.
- 5 “Is robotics necessary?”**

Not mandatory – but it delivers higher accuracy and more predictable results.
